in CodeChef

## Education

**Amity University Noida** 2022-2026  
*B.Tech in Computer Science and Engineering (CSE)*

**Andhra Education Society** 2021-2022  
*Class XII*

## Experience

**Web Development Intern** Gurugram  
*Jabsz* May 2025 – July 2025

- Developed a MERN stack web game using JSON for data.
- Built frontend and backend with JavaScript, integrated with Git.
- Managed project dependencies and collaborated on backend code efficiently.

## Projects

**HR Analytics Dashboard – Employee Attrition & Workforce Intelligence** [Live Demo](#) 

- Techstack:** Power BI, Power Query (M), DAX, Data Modeling (Star Schema), ETL, Excel/CSV, Interactive Data Visualization, Data cleansing and transformation
- Engineered an end-to-end HR analytics dashboard by performing data cleansing, transformation, and feature engineering using Power Query and optimized relational data modeling. advanced DAX measures (Attrition Rate, KPI Metrics, Tenure Analysis) and implemented star schema modeling for high-performance analytical queries.
- Designed interactive drill-through reports with dynamic slicers, cross-filtering, and matrix visualizations to uncover attrition trends across age, salary bands, job roles, and tenure.

**Housing Price Prediction – ML-Based Real Estate Valuation System** [Source Code](#) 

- Techstack:** Python, NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn, Jupyter Notebook, Kaggle
- Built an end-to-end machine learning pipeline to predict median house prices using California housing data, leveraging advanced preprocessing, feature engineering, and regression models.
- Compared multiple regression models including Linear, Ridge, Lasso, Random Forest, and HistGradient-Boosting using 5-fold cross-validation, achieving 18% lower RMSE over baseline linear models.
- Optimized HistGradientBoosting model using GridSearchCV across 240+ hyperparameter combinations, achieving a test  $R^2$  score of 0.83 and RMSE 47k, demonstrating strong generalization.

**Sportz – Live Sports Commentary WebSocket Service** [Live Demo](#) 

- Techstack:** Node.js, Express.js, WebSockets (ws), PostgreSQL (Neon), Drizzle ORM, React, Vite, JavaScript, Arcjet, codeRabbit, SQL
- Designed and built a full-stack real-time sports commentary platform using REST APIs and WebSockets to deliver instant live match updates across multiple concurrent clients.
- Implemented a robust WebSocket subscription system with per-match channels, heartbeats (ping/pong), rate limiting, backpressure protection, and capped subscriptions to ensure stability under load.
- Built a live frontend dashboard that auto-connects to WebSockets, subscribes to matches, and renders real-time play-by-play commentary, demonstrating end-to-end real-time system design and scalability.

## AI Interview Prep Platform – Generative AI Job Preparation System

[Source Code](#) 

- **Techstack:** React.js, Vite, Node.js, Express.js, MongoDB Atlas, JWT, Gemini AI API, Puppeteer, Multer, Axios, SCSS
- Built a full-stack AI platform to analyze resumes against job descriptions, generating match scores, skill gaps, and personalized interview preparation reports.
- Implemented secure authentication using JWT with protected routes and token blacklisting, ensuring safe user session management.
- Integrated Gemini AI to generate technical behavioral interview questions and structured preparation plans using validated JSON schemas.

## Certificates

---

**NPTEL Cloud Computing—2024**

[Certificate](#) 

**NPTEL Python for Data Science — 2024**

[Certificate](#) 

## Technical Skills

---

**Languages:** JavaScript ,Java, Python, SQL, HTML/CSS, SCSS

**Databases and Services:** MongoDB, MySQL, Mongoose, DSA

**Frameworks and Libraries:** Node.js, react.js, Websockets(ws library), scikit-learn, express.js, Gen-AI

**Tools and Tech:** GitHub, Postman, REST API, Kaggle, codeRabbit
